Welcome

Welcome to our Annual Forage-Developed Bull Sale; and thank you for your interest in the genetics we bring forward every year. Over the course of 74 years registering purebred cattle we have been developing and marketing 2-Year-Old bulls exclusively. Within that time our philosophy to breeding cattle really hasn't changed: avoid any shot-gun approach to genetic selection, avoid chasing fads, and remain steadfast in maternal genetic selection.

As cattle producers, we all have access to the same genetics annually. We have focused on stacking proven genetics that fit a desired phenotype; while allowing the environment to sort through the genetic base we have, or have accessed, in order to determine the replacements we keep and the bulls we sell. This has resulted in a multi-generational product that breed true and offer more intrinsic value.

The phenotype of our cattle has moderated over the past two decades, and this is directly attributed to the cows matching the environmental pressure we place on them. However, the percent body weight weaned per cow is now higher. If we were a commercial cow/calf outfit we would have the ability to run more cows per acre with the option to initiate a terminal crossbreeding system to increase yield. Some of our recent herd sire acquisitions emulate this concept.

Pictured as a 5-year old breeding bull is Chapman Titanium 9752 who was purchased in the 2021 sale by the Cayley Colony. This bull emulates a few claims we have made since our first Forage-Developed Bull Sale in 2007:

- Sale day is just a snap shot in time of how our bulls will look. Our bulls continue to develop in a positive manner and albeit developed at a slower pace, they mature into robust, athletic breeding bulls with a high level of virility and libido. To be honest, I don't even recognize most of the bulls I sell a year later – they've continued to grow and gain weight during and after the breeding season. 9752 is one of over 1700 Forage-Developed bulls sold that validate their upside.

Chapman
Cattle Company

- Our bulls are uniform in type which is probably the most reiterated feedback about our cattle. 9752 as the Lot 33 bull looked very similar to Lot 1 and Lot 100 and every bull in between in that 2021 sale. This year's offering no different and is probably as uniform a group as we have sold, even with some outcross sires represented. Bulls of uniformity come from cow herds of uniformity and produce calves with uniformity.
- We were using "moderate and maternal" to describe our breeding program before it became cool to use those adjectives. 9752's dam wasn't a big cow but she was maternal, weaning on average 48% of her mature weight. Between his dam and maternal grand dams in his immediate pedigree, they achieved a combined nursing ratio of 13@103. We pride ourselves on fertility and longevity and publish data on the mother cow's production derived from a big herd of one contemporary group.
- 9752 emulates the annual sale offering where there is an attention to the little things pertaining to proper structure in a breeding bull that is often overlooked in the chase of extra performance or better numbers; such as a clean sheath, proper scrotal shape, a straight topline or a true Angus head.

We recommend that before you buy a bull anywhere, familiarize yourself with their cowherd, their breeding objectives, and their long-term philosophy. There is no way around it, your cowherd inherits its genes from where the herd sires are sourced from, and that can have a profound financial impact on your program for years.

With that, the sale offering represents a cross section of proven maternal genetics. The bull offering is uniform and consistent – quality sells throughout. We are confident in the genetic package we are selling on Thursday, February 22nd, and are available 365 days a year to assist you with your purchases. Thank you in advance for your interest and consideration.

- Efficient sire line for grass-based operations. Positively antagonistic for added milk and strong udder structure while calving on grass.
- Proven lineage with Traveler 6807 x Rito 707 x Emulation 31 all up close in pedigree.
- Dam earned a progeny weaning and yearling of 107 and 104 respectively on 10 calves.
- Like his paternal brothers that have worked here, covering 60 cows in a season was like a morning snack. High libido, we used him on older cows to produce Memento daughters.

- A high percentage of his daughters made the replacement pen with a real brood cow look to them. Like their maternal grandmother, they should be a productive group.
- Typical of Equation daughters, his dam annually got it done, having earned a weaning and yearling ratio of 109 and 111 respectively on 11 calves.

- 712 is a very masculine bull and I fully anticipate that to translate into some very desirable daughters. Top 1% in the breed for \$M. Two consecutive generations of Pathfinder dams. Dam is the maternal grand dam to the popular Sitz Stellar.
- Co-owned with Crescent Creek Angus.

- Not a lot of direct OCC Echelon sons around anywhere if at all. Echelon was a bull that left some fluffy eared, efficient daughters that had fertility and longevity to them.
- 32G combines all that with more growth, frame and length of spine.
- Posted a BW 97, WW 826, YW 1332. Used on cows and heifers.
- Excellent libido, he sired a high % of calves in a large multi-sire pasture of mature bulls. It's evident his sons possess that quality, a trait not observed in a straw of semen.
- His dam was a very productive cow at Bar-E-L and had two sons walking here in 2022. Utilize this Echelon downline to solidify those foundation maternal attributes.

- 8522 was sold through the 2020 Bull Sale to the Byemoor Colony and repatriated after a few years of exclusively breeding heifers.
- Like his sire, 8522 offered heifer friendly calving ease, yet there was something in the fall coming across the scale. Lots of newborn vigor.
- His easy keeping dam posted a NR 5/98 and his maternal grand dam earned a NR 11/109 who produced resident herd sire Chapman Recourse 8613.
- Interesting to note the first Equation 5793R daughters are now entering their 18th year and easily make an argument for continuity of this lineage.

- He is an outlier in that he is a big ribeye bull having posted an actual yearling REA of 17.60 to ratio 131 while earning a 107 IMF ratio.

EPD EXPLANATION

EPD's are predictions on how each bull rates against his own contemporary group and the rest of the breed. EPD's evaluate group averages and offspring's performance, however they cannot predict individual performance or weights.

For example, if Bull A (WW EPD of +10) & Bull B (WW of +60) were randomly mated with 10 similar cows, we would expect the group avg. weaning weight of Bull A's offspring to be 50 lbs. lighter than Bull B's ($60 - 10 = 50$).

BW	Birth Weight - expressed in pounds, is a prediction of a sire's ability to transmit birth weight to his progeny
WW	Weaning Weight - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny
YW	Yearling Weight - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny.
MILK	A predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters
CE	Calving Ease Direct (CE), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.
MCE	Maternal Calving Ease (MCE) is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.
